consequence of eating is as old as calorimetry, being contained in the first records of Lavoisier 2 1. The ruminant nutritionist quantifies this association between food intake and H t by use of the expression 'the heat increment of feeding' (HIF) which describes the increase that occurs in H t ...

~~Energy costs of digestion and metabolism in the gut ...~~

Such a system regulates the outflow of gases, water, salts, and a wide variety of nitrogenous and nonnitrogenous organic compounds. It should be emphasized that although the kidney is one of the most important excretory organs it is not the only one. In fact, every mammalian surface is a potential excretory organ.

~~MGI—Biology of the Laboratory Mouse—MGI Mouse Genome ...~~

Abstract. Gram-negative microorganisms such as Enterobacteriaceae and Pseudomonaceae normally belong to the flora of the digestive tract. This close and peaceful coexistence may reflect a relatively low virulence of the bacteria, although under certain circumstances, invasion of the blood stream can occur.
