This National Association of Rocketry handbook covers designing and building your first model rocket to launching and recovery techniques, and setting up a launch area for competition.

Solving problems in chemical reaction engineering and kinetics is now easier than ever! As students read through this text, they'll find a comprehensive, introductory treatment of reactors for single-phase and multiphase systems that exposes them to a broad range of reactors and key design features. They'll gain valuable insight on reaction kinetics in relation to chemical reactor design. They will also utilize a special software package that helps them quickly solve systems of algebraic and differential equations, and perform parameter estimation, which gives them more time for analysis. Key Features Thorough coverage is provided on the relevant principles of kinetics in order to develop better designs of chemical reactors. E-Z Solve software, on CD-ROM, is included with the text. By utilizing this software, students can have more time to focus on the development of design models and on the interpretation of calculated results. The software also facilitates exploration and discussion of realistic, industrial design problems. More than 500 worked examples and end-of-chapter problems are included to help students learn how to apply the theory to solve design problems. A web site, www.wiley.com/college/missen, provides additional resources including sample files, demonstrations, and a description of the E-Z Solve software.

The secret to streamlined scheduling of mining and civil engineering projects is a solid understanding of the basic concepts of rock cutting mechanics. Comparing theoretical values with experimental and real-world results, *Mechanical Excavation in Mining and Civil Industries* thoroughly explains various rock cutting theories developed for chisel, conical, disc, and button cutters. The authors provide numerical examples on the effect of independent variables on dependent variables, as well as numerical and solved examples from real-life mining and civil engineering projects using equipment such as: Hard- and soft-ground tunnel boring machines (TBMs) Roadheaders Shearers Ploughs Chain saws Raise borers Impact hammers Large-diameter drill rigs Microtunnel boring machines This book assists students and practicing engineers in selecting the most appropriate machinery for a specific job and predicting machine performance to ensure efficient extraction, and offers background information on rock cutting mechanics and different mechanical miners.

In this long-awaited memoir, illustrated with over 100 never-before-seen photos from his personal collection, the groundbreaking record producer chronicles his struggles, his success, and the celebrated artists that made him a legend. Over the last twenty-five years, legendary music producer and record man LA Reid—the man behind artists such as Toni Braxton, Kanye West, Rihanna, TLC, Outkast, Mariah Carey, Pink, Justin Bieber, and Usher—has changed the music business forever. In addition to discovering some of the biggest pop stars on the planet, he has shaped some of the most memorable and unforgettable hits of the last two generations, creating an impressive legacy of talent discovery and hit records. Now, for the first time, he tells his story, taking fans on an intimate tour of his life, as he chronicles the fascinating journey from his small-town R&B roots in Cincinnati, Ohio, and his work as a drummer to his fame as a Grammy Award-winning music producer and his gig as a judge on the hit reality show, *The X Factor*. In *Sing to Me*, Reid goes behind the scenes of the music industry, charting his rise to fame and sharing stories of the countless artists he's met, nurtured, and molded into stars. With fascinating insight into the early days of artists as diverse as TLC, Usher, Pink, Kanye West, and Justin Bieber, his story offers a detailed look at what life was like for stars at the start of their meteoric rise and how he always seemed to know who would be the next big thing. What emerges is a captivating portrait from the inside of popular music evolution over the last three decades. Part music memoir, part business story of climbing to the top, this beautifully designed book, jam packed with photos, showcases Reid's trademark passion and ingenuity and introduces a multifaceted genius who continues to shape pop culture today.

In compiling this landmark sourcebook, Finnish guitarists Hannu Annala and Heiki Matlik consulted more than 70 music texts as well as dozens of composer resumes acquired from the musical information centers of several countries. During the writing process, which lasted for more than three years, they received additional information from many modern composers, including Leo Brouwer and Reginald Smith Brindle among others. In addition, several internationally renowned performing guitarists provided valuable information; these include Magnus Andersson (Sweden), Remi Boucher (Canada), Margarita Escarpa (Spain), Aleksander Frauchi (Russia) and David Tanenbaum (USA) among others. The authors' aim was to write a well-structured book with separate chapters for each instrument, such as the Renaissance and Baroque guitar, the Renaissance and Baroque lute, the vihuela, etc. This unique structure enables the reader to easily discover which composers wrote for a certain instrument during any given period. In addition to the composers one would expect to find in such a comprehensive listing, the book documents several historical and modern composers for whom little previous information has been available. The book's list of more than 400 guitar and lute concertos dating from the Baroque era to the present day is a totally unprecedented. Short introductions regarding guitar and lute-like instruments as well as their basic histories are provided at the beginning of the book. The authors hope that the *Handbook of Guitar and Lute Composers* will serve as a practical guide for both amateurs and professionals, encouraging further study of the history of these instruments and expanding the repertoire heard on today's concert stage.

This plan sets out the policies and actions needed to ensure an adequate, effective and well-managed network of protected areas in Europe. It outlines how potential areas should be integrated with other sectors, such as agriculture, forestry and tourism; sets out priorities at European, sub-regional and national level; proposes actions to strengthen the legal framework, planning and management of Europe's protected areas, and explains how to create the public support necessary for success.
