Aug 29, 2020 occupational therapy practice guidelines for individuals with autism spectrum disorder Posted By Hermann HessePublishing TEXT ID 386755d2 Online PDF Ebook Epub Library in the natural context of the desired occupation

Occupational therapy is steeped in the sciences that provide knowledge and understanding of human development and function and the variables that influence these aspects of human life. The registration, processing, and integration of sensory information can both support and inhibit the ability for children and adolescents to function in their environment. Up to 15% of school-age children are believed to have sensory challenges, and at least 40% of individuals with developmental disabilities and 80% of those with autism are affected. Using an evidence-based perspective and key concepts from the Occupational Therapy Practice Framework: Domain and Process, this new AOTA Practice Guideline provides an overview and insight into occupational therapy evaluation and intervention for youth that experience sensory information difficulties. Designed primarily for clinical practitioners, this important practice guideline from AOTA Press is a vital reference for occupational therapy students and educators and provides a clear definition on the role of occupational therapy services for policymakers and other health care professionals who work with children and adolescents that face these challenges.

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.

Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs. Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing; cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young

## Read Book Occupational Therapy Practice Guidelines For Home Modifications The Aota Practice Guidelines Series

children. This guideline can also serve as a resource for parents, school administrators, educators, and other early childhood staff.

By 2030, nearly 20% of the U.S. population will be ages 65 or older, and the fastest growing segment among them will be people ages 85 or older. Individuals in this oldest age group have the highest rates of health care utilization, morbidity, and disability. To support productive aging and continued participation, older adults must remain engaged in their desired roles and routines, daily activities, and occupations. This Practice Guideline provides an overview of the occupational therapy process in productive aging, defining the domain and interventions that occur within acceptable practice. It provides evidence for interventions with IADLs, fall prevention and home modification, health management and maintenance, and occupational engagement and health outcomes. This Practice Guideline will help occupational therapists and occupational therapy assistants, as well as the individuals who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy services to facilitate productive aging for community-dwelling older adults.

Forlagets beskrivelse: Too often, older or disabled people live limited lives or give up their homes and neighborhoods prematurely because standard housing cannot meet their needs. Home modifications - or alterations, adjustments, or additions - to a home can help older or disabled people age in place and stay in their communities, which is often their preference. Occupational therapy plays a significant role in assessing needs, identifying and training in solutions, and evaluating outcomes in home modifications. This Practice Guideline serves as a reference for occupational therapists and occupational therapy assistants, as well as for designers, builders, social services providers, health care facility managers, managed care organizations, and health care regulators. It defines the contribution that occupational therapy can make to the home modification process through evaluation, consultation, and training with clients or consumers who need home modifications.
