**Smart Contracts: The Essential Guide to Using Blockchain ...**

A Beginner's Guide to Smart Contracts. TLDR: A smart contract is a computer protocol intended to digitally facilitate, verify, or enforce the negotiation or performance of a contract . Smart contracts allow the performance of credible transactions without third parties. One of the best things about the blockchain is that, because it is a decentralized system that exists between all permitted parties, there's no need to pay intermediaries (Middlemen) and it saves you time and conflict.

A smart contract is defined in simple terms as a program or code that can execute the requirements of a contract on its own. Individuals essentially pay to have a program create a contract for their use. In short, it is another way to automate specific documents. While smart contracts are now gaining attention, they've been around since the early 1990s.
